

“Scratch That”

After School Code Club

The Idea

A side hustle teaching kids to code using Scratch. You show up, teach a fun class, get paid fairly, and go home. We handle everything else.

How It Works

We develop a curriculum together, then partner with tutoring centers (Mathnasiums, Kumon, etc.) to run after-school coding classes in their space. Teachers develop the curriculum and lead the sessions.

Format	8-week courses, 1.5 hours per class
Ages	Elementary / middle school (exact range TBD based on demand)
Platform	scratch.mit.edu

Developed by MIT, Scratch is the world's largest coding community for children — a visual programming language that lets young people create digital stories, games, and animations. It promotes computational thinking, creativity, collaboration, and equity in computing. Always free, available in 70+ languages.

The Team

Daniel	Business side. Finds locations, handles partnerships, manages enrollment, deals with parents, invoicing, marketing. Covers all startup costs.
Curriculum Developer	A role I'm actively looking to fill. This person will design and oversee lesson plans, coordinate teacher feedback, and serve as a creative co-creator of the program. Paid hourly to start, with potential revenue share as the program grows.
Teachers	Show up, teach great classes, get paid fairly. Contribute ideas if you want, but no pressure.

Who Does What

Daniel	Curriculum Developer	Teachers
Finds locations and negotiates partnerships	Leads curriculum design	Teach classes (paid hourly)
Handles enrollment, parents, scheduling	Coordinates teacher input, focus groups, feedback sessions	Give feedback on what's working and what's not

Marketing and sales	Maintains and updates materials	Show up prepared and have fun
All invoicing and money stuff	Quality control on lesson plans	
Startup costs		

The Deal for Teachers

- Paid hourly for any curriculum development work
- Paid hourly for teaching
- No chasing payments, no parent emails, no admin
- Teach as much or as little as your schedule allows
- Creative input welcome but never required off the clock
- All materials are shared freely — use them, adapt them, whatever

What Makes This Different

This isn't a startup trying to scale to 50 cities. It's a small, local thing meant to be enjoyable for everyone involved. The goal is meaningful work, fair pay, and teaching kids something cool.

Next Steps

Phase 0 — Learn Together (2–4 weeks)

Daniel and the curriculum developer learn Scratch together, documenting what works: pacing, concepts, projects that click. This becomes the foundation of the curriculum.

Phase 1 — Build the Curriculum

Dara formalizes lessons based on Phase 0. We outline the full 8-week arc.

Phase 2 — Pilot

Daniel approaches 2–3 local centers. Run first session with real kids, learn, adjust.

Questions? Ideas? Let's talk.
